Individual Add-on Tests

You may choose any of the following tests as an add-on to your package:

Cancer Screening		
Liver (AFP)	Alpha-Fetoprotein is a protein to screen for liver cancer.	\$35^
Stomach/ Colon (CEA)	Carcinoembryonic Antigen is a type of molecular protein which can be found in many different cells in our body. A rise in CEA level indicates progression or recurrence of the cancer.	\$35^
Pancreas <i>(CA19.9)</i>	CA19.9 is a screen for pancreatic cancer. The pancreas produces enzymes to digest food and insulin to regulate blood sugar levels.	\$35^
Nose & Throat (EBV)	Epstein-Barr Virus is a common virus which can potentially lead to several rare cancers such as Hodgkin's Lymphoma, Nasopharyngeal carcinoma etc.	\$35^
Germ Cell <i>(Beta HCG)</i>	An elevated Beta Human Chorionic Gonadotropin level indicates abnormalities in the uterus, ovaries or testicles.	\$35^
Stomach (Helicobacter Pylori)	Helicobacter Pylori is a bacterium that can be found in the stomach. This bacterium causes chronic inflammation which may lead to stomach ulcers, gastritis, and cancer.	\$35^
Prostate (PSA) (Males only)	Prostate-Specific Antigen is a protein produced by cells of the prostate gland. It is elevated in some prostate disorders (e.g. enlargement, cancer)	\$35^
Ovarian (CA125) <i>(Females only)</i>	CA125 is a protein found in women. It is relatively higher in women who have ovarian cancer.	\$35^
Breast (CA15.3) (Females only)	CA 15.3 is used to monitor for breast cancer.	\$35^
Stool Occult Blood	Stool Occult Blood (Immunological) is a test that checks for occult (hidden) blood in the stool. Blood in the stool may be a sign of colorectal cancer or other problems such as polyps, ulcers, or haemorrhoids.	\$25^
Heart Disease Screeni	ng	
Basic Cardiac Screen	Consists of Apolipoprotein A, Apolipoprotein B & Apo B/A1 Ratio. The measurement of these apolipoproteins could improve cardiovascular risk prediction.	\$65^
Advanced Cardiac Screen	Consists of hsCRP, Apolipoprotein A, Apolipoprotein B & Apo B/A1 Ratio. High Sensitive C-Reactive Protein measures the level of inflammation in the body. This may lead to several heart-related conditions such as heart attack, stroke, and peripheral artery disease.	\$85^
Nutrition Deficiency		
Nutrition Deficiency Screen (Vitamin D, Vitamin B12, Folate, Iron, Total Iron Binding Capacity, % Iron Saturation & Ferritin)	<u>Vitamin D</u> is essential for the body's absorption of calcium and is essential for bone health. It has also been linked to our immune system and cardiovascular health. It is estimated that up to 40% of Singaporeans are deficient in Vitamin D. <u>Vitamin B12, Folate (Vitamin B9) and Iron</u> are essential for production of red blood cells. A deficiency in Folate and Vitamin B12 can also result in mouth ulcers, hair loss, as well as nerve and memory problems.	\$148^
Hormone Testing		
Testosterone	This is the principal male sex hormone that plays key roles such as enhanced libido, energy, immune function and protection against bone loss. Testosterone levels decline gradually with age.	\$35^
Anti-Mullerian Hormone (Ovarian Reserves)	Anti-Müllerian hormone (AMH) is a protein produced by cells in ovarian follicles, the structures in the ovaries that contain developing eggs. It's often used as a marker of ovarian reserve, which refers to the quantity and quality of a woman's remaining eggs.	\$112^

Cont. Individual Add-On Tests

Hormone Testing		
Female Fertility Profile	The profile consists of Estradiol, Progesterone, Follicular Stimulating Hormone, Luteinising Hormone, Prolactin. Hormones related fertility, menopause and period problems.	
Male Fertility Profile	The profile consists of Testosterone, Follicular Stimulating Hormone, Luteinising Hormone, Prolactin. Hormones to further investigate the root of male infertility.	\$80^
Infectious Diseases		
Hepatitis A and B Screen	The Hepatitis A and B screen includes testing for Hepatitis B Antigen (HBsAg), Hepatitis B Antibody (HBsAb) & Hepatitis A Antibody (HAV). This determines if a person has ever been infected with Hepatitis A and Hepatitis B. This test also measures whether your immunity against Hepatitis B has decreased over time (after the last vaccination), and determines if another Hepatitis B booster vaccination is required. Hepatitis B is a risk factor for liver cancer and it is important to remain protected against it.	\$40^
HIV Testing	HIV is a virus that weakens the immune system and can lead to acquired immunodeficiency syndrome (AIDS).	\$20^

Allergy Tests

	Comprehensive 59 Panel (59 Allergens) (<u>Click here for the full list of allergens)</u>	\$610^
	Inhalant Panel 1 (15 Allergens)	\$486^
	Inhalant Panel 2 (5 Allergens)	\$225^
	Seafood Panel 1 (8 Allergens)	\$324^
Allergy Testing	Seafood Panel 2 (8 Allergens)	\$324^
	Nuts Panel (8 Allergens)	\$351^
	Eczema Panel (11 Allergens)	\$414^
	Asthma Panel (11 Allergens)	\$360^
	Gastro Panel (6 Allergens)	\$270^
